

The Address Archive module is a feature that allows users to search on listings that have been purged from the system. By default when a listing is set to be purged all but 12 fields will be purged from the database, see table below. These fields will be kept in the database and can only be viewed via the Address Archive.

| Fields kept after listing is Purged |              |
|-------------------------------------|--------------|
| MLS #                               | Listing Date |
| Class                               | City         |
| Type                                | State        |
| Area                                | Zip          |
| Asking Price                        | Status       |
| Address                             | IDX Include  |

Click **Search** then click **Address Archive Search**.

You can search by **Area**, **Addresses** and/or **Status**.

Note: You can search by a specific address or by a range.

You may click **Count** and or **Search** as you would when running any other Search.
